SMAART-Net™
Connecting it all together

FEATURES

- Managed image transmission
- Graphical user interface (GUI) allows simultaneous tracking and retransmission of studies to multiple sites
- Proprietary accelerated transmission technology allows for transmission up to 5 times faster than conventional transport methods
- Unlimited bandwidth capability
- Intelligent routing, secure HIPAA compliant network
- Eliminates managing multiple VPN connections (single connection to SMAART-Net)
- Single point of connection to worldwide image delivery
- Provides image push to any number of required destinations with just one transmission
- Rules-based routing for time of day and multi-location transmissions
- Automatic archiving with SMAART hosted Archive

SMAART-GCS

Modality

SMAART-Net

SMAART-Net utilizes intelligent routing via SMAART's HIPAA compliant data center

Radiologist Reading Location 1

Radiologist Reading Location 2

Referring Physician PDIS

BENEFITS

- Worry-free connections between scanning centers and reading locations
- SMAART exclusive software extensions provide T1 performance on inexpensive DSL or cable modem connections
- GUI tracking system allows for monitoring of image transmission to validate receipt at all receiving locations
- Reading locations receive images within minutes of acquisition
